

Carlos A. Cruz

WORK ADDRESS	Building 28, Room W250 NASA Goddard Space Flight Center Mailstop 606 Greenbelt, MD 20771	<i>Voice:</i> (301) 286-3716 <i>Fax:</i> (301) 286-1775 <i>E-mail:</i> carlos.a.cruz@nasa.gov
HOME ADDRESS	7011 Devereux Circle Dr. Alexandria, VA 22315	<i>Phone:</i> (703) 405-4721 <i>E-mail:</i> carlos.a.cruz@gmail.com
EDUCATION	George Mason University , Fairfax, VA USA <i>Department of Atmospheric, Oceanic, and Earth Sciences</i> Ph.D., Climate Dynamics, December 2010 Dissertation Topic: “Global Circulation Variability Induced by Southern Ocean Winds” Advisor: Dr. Barry Klinger George Mason University , Fairfax, VA <i>Computational Sciences and Informatics</i> Completed coursework and thesis proposal toward a Ph.D. degree in Computational Materials Science. Proposal title: “Optimization of molecular clusters”, February, 2000 George Mason University , Fairfax, VA <i>Department of Physics</i> M.S., Applied Physics, May, 1996 B.S., Physics, May, 1988	
RESEARCH INTERESTS	Software engineering for scientific applications, climate dynamics, numerical modeling of physical systems, machine learning.	
SKILLS	<ul style="list-style-type: none">• Experience in running climate, weather, and data assimilation systems of operational complexity on high-performance computers• Weather and climate models: NCAR WRF, NASA GISS’ modelE, NASA GMAO’s GEOS-5, GFDL’s MOM4, RSMA’s HyCOM• Programming languages: Fortran, Python, C/C++, shell scripting.• High-performance computing tools: MPI, totalView, Allinea, TAU.• Visualization and editing tools: Matlab, Grads, L^AT_EX, MS Office.• Operating Systems: Unix/Linux, Darwin OS, Microsoft OS.	
PROFESSIONAL EXPERIENCE	NASA/GSFC, Advanced Software and Technology Group , Greenbelt, MD <i>SSAI Chief Scientific Programmer Analyst, 5/12 - present</i> <ul style="list-style-type: none">• Lead software engineer for the NASA Unified Weather Research and Forecasting (NU-WRF) modeling system.• Architect and lead software engineer of <i>eViz</i> visualization project. The project involves the development of tools to help visualize Earth system model data streams.• Team member in the TERRAHydro project. The goal of this project is to develop a reusable AI-first framework, the Coupled Reusable Earth Systems Tensor (CREST) framework, for building Earth System Models (ESMs) or Earth System Digital Twins (ESDTs) and to leverage CREST to build the TERRAHydro land surface model (LSM).• A lead member in the modelE re-engineering effort. The work consisted of refactoring and testing the NASA-GISS modelE climate model to reduce the long-term cost of maintaining and extending	

model code.

- Over the years I have supervised and trained various junior members within the organization to perform sub-tasks within the aforementioned modeling efforts.
- Developed a Python based regression testing framework, **reg**, used in GISS modelE and NU-WRF.
- Helps to organize and train scientists and engineers in NASA's Training Bootcamps.

NASA/GSFC, Advanced Software and Technology Group, Greenbelt, MD

NGIT Physicist IV, 1/07 - 4/12

- Team member in the development of a giga-particle trajectory model. This model was developed *ab initio* in C++ using test-driven development techniques. The model was parallelized using MPI and was capable of performing stratospheric trajectory simulations with billions of parcels.
- Team member in the Moving Objects Database (MOD) project. The application used various techniques to automate the identification of meteorological events by ingesting the required data (satellite, reanalysis, etc) into a database for cataloging. I developed various JAVA classes used to ingest data sources and was responsible for executing and diagnosing the production runs.
- Collaborated in the the Elastic Parallel IO (EPIO) project where I provided advice and direct support to the EPIO staff in their efforts to port their software to NASA computer systems. The EPIO project aims to use an optimized IO library called ADIOS that will significantly improve the IO performance of GEOS5 and potentially modelE.
- Developed the online GEOS-5 GCM user's guide on NASA's modeling guru website. I am also the primary moderator (and frequent contributor) of various communities on the NASA modeling guru website.
- Helped in the development and creation of the scripts and workflow configurations that run a climate model (GEOS-5) under a JAVA-based workflow tool. Scripts perform setup, execution, and archival of GEOS-5 experiments.
- Helped to develop a MAPL component analyzer tool written in Perl (MAPL is a software layer and set of conventions to standardize the use of the Earth System Modeling Framework (ESMF)).
- Have assisted in various efforts to make GEOS-5 model components to be ESMF and/or MAPL compliant.

NASA/GSFC, Global Modeling and Assimilation Office, Greenbelt, MD

NGIT Senior member of technical staff, 5/02 - 12/06

- Participated in developing Earth System Modeling Framework (ESMF) applications to be used in the GEOS-5. GEOS-5 integrates the GEOS-5 AGCM with the Grid-point Statistical Interpolation (GSI) atmospheric analysis developed jointly with NOAA/NCEP/EMC. The GEOS-5 systems are being developed in the GMAO to support NASA's earth science research in data analysis, observing system modeling and design, climate and weather prediction, and basic research.
- Responsible for computational requirement identification, planning, data structure and algorithm design, and software implementation for Part III of the ESMF (Data Assimilation) project suite working under the guidance of the principal investigator. Acquired practical experience with satellite radiances, satellite-based climate data records and data assimilation. Programming activity includes design and development of new parallel software, and modification and adaptation of existing software packages and libraries in multi-language environments.

NASA/GSFC, Science Data Systems Branch, Greenbelt, MD

NGIT Senior member of technical staff, 1/02 - 4/02

- Lead a study to develop a disease forecasting tool: Tool consisted of a disease forecasting system that helped identify the spread of a vector-borne disease as a function of weather.
- Developed task goals, performed literature review, identified statistical tools, data sets and began tool development.

NASA/GSFC, NASA Center for Computational Sciences , Greenbelt, MD

NGIT Senior member of technical staff, 4/00 - 12/01

- Helped to develop a coupler component used to provide an interface between two systems, a weather model and a data assimilation system, defined on different computational grids. Main responsibilities included design, development, and testing of scientific code on a Cray SV1 and O2K computer systems. Programming was performed in Fortran 90.
- Additional responsibilities included writing Unix scripts and utilizing several software packages to aid in the software engineering process.

US Bureau of the Census, Suitland, MD

SAIC Programmer, 8/98 - 3/00

- Extensive involvement in the creation of new software that interfaces with the TIGER database system for aiding in the census 2000 map production. My main contribution was the creation of a software module that implemented a genetic algorithm to solve a map coloring problem used in the creation of census maps.
- Programming was performed in C running under a Perl script in a UNIX environment.
- Responsible for modifying existing code, writing and implementing change requests, and other facets of the software design process.

CACI Federal, Inc, Arlington, VA

Systems Engineer, 3/96 - 1/97

- Developed and tested code for various modules of the Configuration Management Information System (CMIS) software.
- Designed Graphical User Interface (GUI) for the CMIS project using OBJECTVIEW. Developed stored procedures and triggers in ORACLE7 to maintain database integrity. Maintained the data transfer utility programs for the CMIS project.

Walter Reed Army Institute of Research, Bioengineering Section, Washington D.C.

Research assistant, 10/90 - 10/95

- Aided in developing experimental test models for the Film-less Dental Imaging (FDI) Project.
- Performed the statistical data analysis and wrote computer code to aid in the project when needed.
- Experiments involved the use of oscilloscopes, multimeters, and Geiger counters.
- Performed all kinds of mechanical duties involving machine shop instrumentation. Assisted in inventories, stocks, general laboratory management, and various administrative duties.
- Analyzed polymers with a 300 MHz NMR for the Micro-encapsulation Project.

MENTORING

Anna Boone, University of Oregon, 2024 NASA Summer Intern. Project: "sViz: a browser tool for creating visualizations using eViz"

Aarav Khanna, Cornell University, 2023 NASA Summer Intern. Project: "eViz: Enhanced visualization utilities for NU-WRF models"

Deon Kouatchou, Carnegie Mellon University, 2023 NASA Summer Intern. Project: "ASSERT - A Software Suite for Earth-Systems Regression Testing"

Deepthi Raghunandan, University of Maryland, 2021 NASA Summer Intern. Project: "eViz: Exploring Earth System Data Products and Diagnosing Earth System Models using a visualization environment"

Trisha Michael, South Dakota School of Mines and Technology, 2012 NASA Summer Intern. Project: "Preliminary Analysis of Tornado Producing Mesoscale Convective Systems using Event Tracker Program"

TEACHING

Adjunct Assistant Professor, Department of Computational and Data Sciences, George Mason University University, Fairfax, VA. 8/18-present:

- Modeling and Simulation I (CDS 230)
- Elements of High Performance Computing (CDS 351)
- Computing for Scientists (CDS 130) - Spring 2020 only

Lecturer, NASA Goddard Space Flight Center. Teaching duties:

- "ASTG Git/Github Training", Goddard Space Flight Center, Spring and Summer 2025
- "ASTG Fortran Training", Goddard Space Flight Center, Spring and Fall 2024
- "ASTG Git/Github Training", Goddard Space Flight Center, Spring and Fall 2024
- "ASTG Fortran Training", Goddard Space Flight Center, Spring and Fall 2023
- "ASTG Git/Github Training", Goddard Space Flight Center, Spring and Fall 2023
- "ASTG Fortran Training", Goddard Space Flight Center, Spring and Fall 2022
- "ASTG Git/Github Training", Goddard Space Flight Center, Spring and Fall 2022
- "ASTG Fortran Training", Goddard Space Flight Center, Fall 2021
- "GSFC Python Boot Camp", Goddard Space Flight Center, Summer 2020
- "GSFC Python Boot Camp", Goddard Space Flight Center, Summer 2019
- "NASA Langley Best Practices Workshop", SSAI Hampton, VA, Spring 2019
- "NASA Langley Fortran Training", SSAI Hampton, VA, Fall 2018
- "GSFC Python Boot Camp", Goddard Space Flight Center, Summer 2018
- "GSFC Python Boot Camp", Goddard Space Flight Center, Summer 2017
- "NASA Langley Python Training", SSAI Hampton, VA, Spring 2017
- "NASA Langley Python Training", SSAI Hampton, VA, Fall 2016
- "GSFC Python Boot Camp", Goddard Space Flight Center, Summer 2016

Teaching Assistant, Department of Computational and Data Sciences, George Mason University University, Fairfax, VA.

- Department of Physics, George Mason University University, Fairfax, VA. 1/97-5/98
- Department of Physics, George Mason University University, Fairfax, VA. 1/89-12/89

AWARDS

- Computational Sciences and Informatics Fellowship: 1997-98 academic year.
- TASC Special Achievement Award: February, 2001.
- Robert H. Goddard Exceptional Achievement Team Award for Science: August 2010 (part of team)
- Northrop Grumman TAP award: December, 2011

SOCIETIES

- Member of the American Geophysical Union.
- Member of the American Meteorological Society.
- Sigma Xi: The Scientific Research Society

SPECIAL QUALIFICATIONS

- Numerical Methods
- Scientific Programming
- Parallel Programming
- Geophysical Modeling
- Foreign language - fluent in Spanish
- U.S. citizen

VOLUNTEERISM

- Tutor, Alexandria city public schools, 2016-2017 Academic year.
- Tutor, Fairfax county adult education, Spring 2014.
- Frequent science fair judge at Alexandria and Fairfax public schools.
- Sigma Xi Research showcase online judge.
